# TECHNICAL SYMPOSIUM

Asphalt.

ONTARIO RIDES ON US

ORBA

# Ontario Asphalt Expert Task Group (OAETG)

Well-balanced group providing an open forum to all industry stakeholders

**Chair: Sina Varamini, Ph.D., P.Eng., MCSCE**  
*Director, Pavements and Materials Group*  
*Engtec Consulting Inc.*

**Vice-Chair: Pejoohan Tavassoti, Ph.D.,**  
*Assistant Professor*  
*University of Waterloo*

**Secretary: Amma Wakefield, Ph.D., P.Eng.,**  
*Canadian Regional and Research Engineer*  
*Asphalt Institute*

# Ontario Asphalt Expert Task Group (OAETG)

## OUR MANDATE

I-ABC

**Identify** improvements to binder and mixture specification and testing methods

*Ontario-specific climate and traffic conditions*

**Act as an advisory group**

*Recommending and/or perform asphalt research interests and needs*

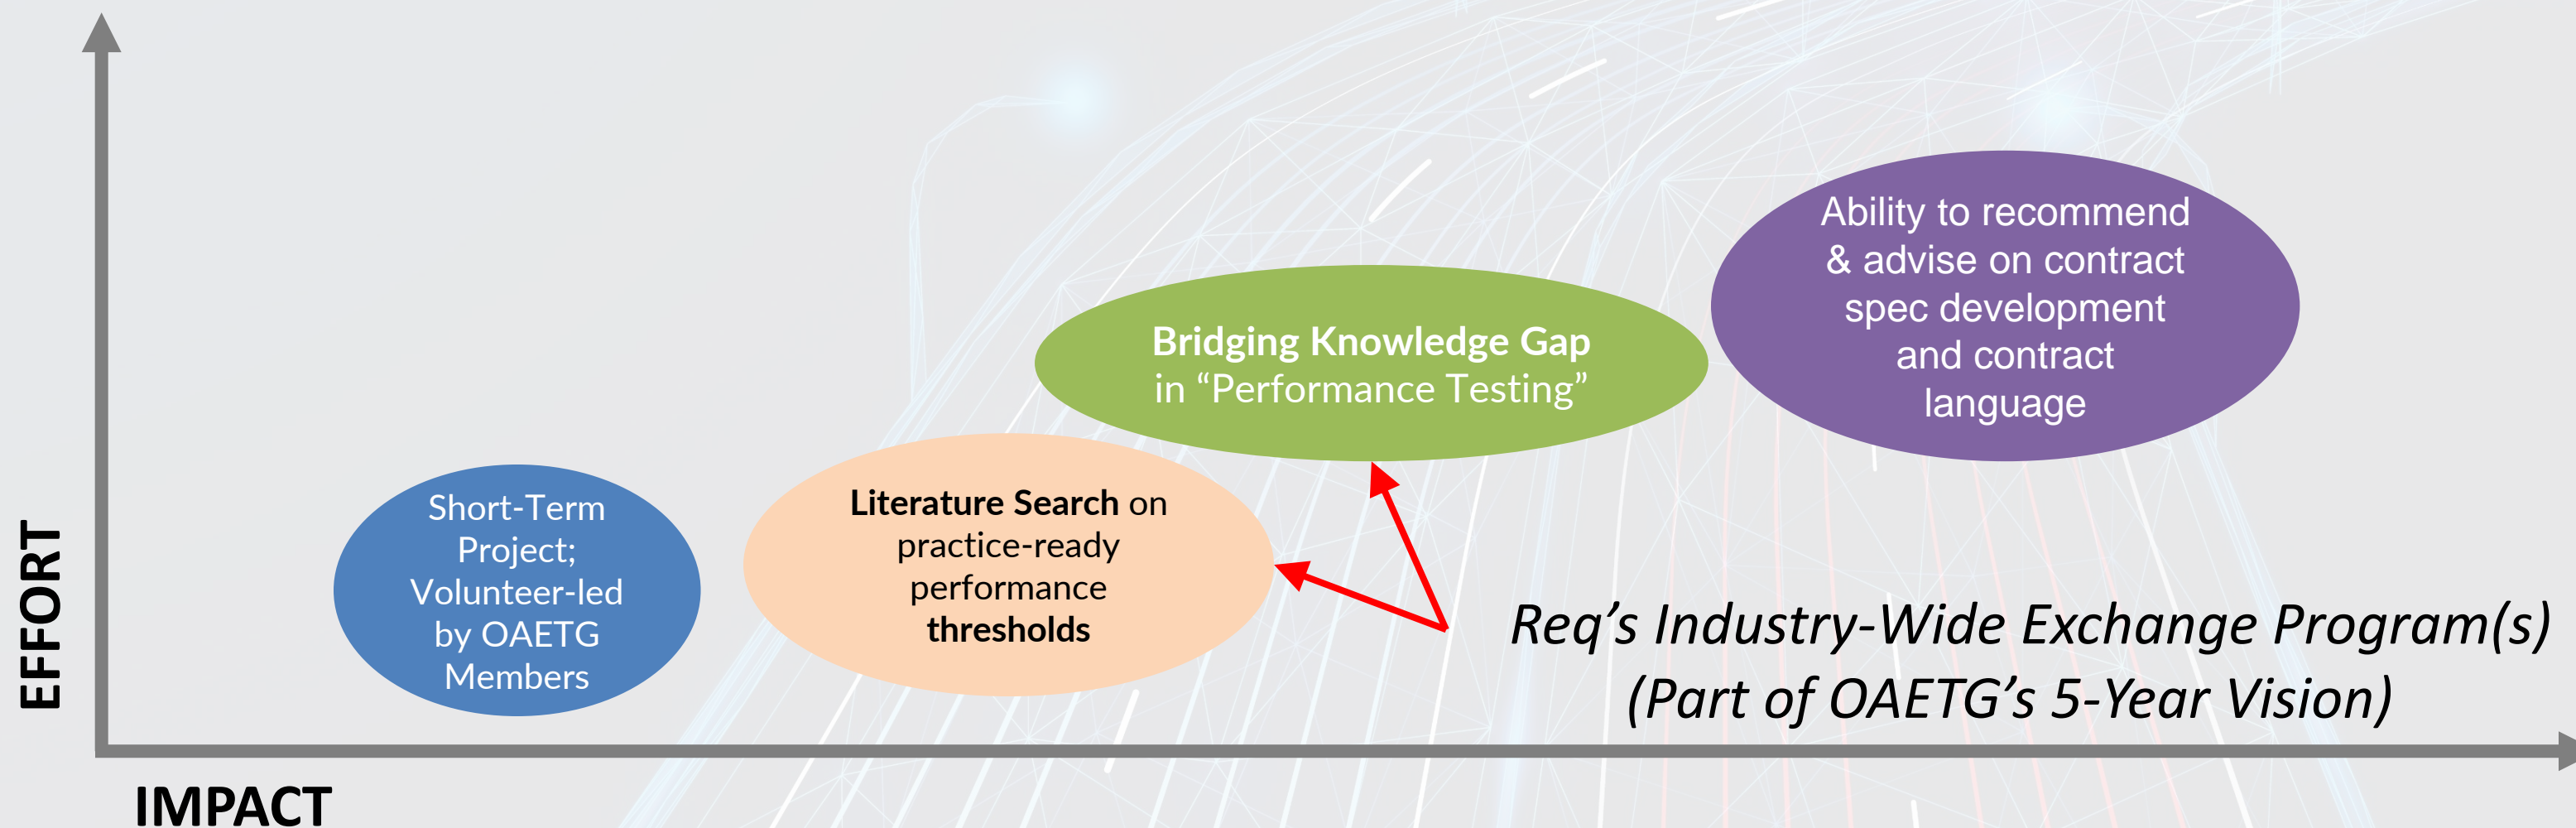

**Brainstorm** asphalt-related and emerging issues

*Particularly on subjects of RAC and Mix Performance acceptance*

**Contribute** to content development and organization of the Asphalt Technical Symposium (ATS)

# Ontario Asphalt Expert Task Group (OAETG)

## OAETG's approach to I-ABC | ACTIONS

# Ontario Asphalt Expert Task Group (OAETG)

## MIX ASPHALT PROGRAM (MAP) ROUND-1

### OBJECTIVES (WHAT)

#### Understanding **Variability**

Inherent variability within test method – test variability

Variability due to mix properties – volumetrics variability

Interlaboratory variability – equipment(s) and technician(s)

Bridge the knowledge gap in “Performance Testing Methods and Acceptance”

# Ontario Asphalt Expert Task Group (OAETG)

## MIX ASPHALT PROGRAM (MAP) ROUND-1

### OBJECTIVES (WHAT)

### RESOURCES (HOW)

**Plant-Produced Loose-Mix** Donated by **Two (2)** contractors

Sampled Summer 2021 – **Limited Study**

Representative of SP12.5 “CAT-E” – Zone 3 (PGAC 70-28 XJ)

### Test Methods

Hamburg Wheel Tracking Test (**HWT**)

Semi-Circular Bend Test – Flexibility Index (**FI**)

Disk-Shaped Compact Tension Test (**DCT**)

**PGAC** on tank samples and **RAC**

**Four (4) Testing Labs** with full to partial capabilities

# Ontario Asphalt Expert Task Group (OAETG)

## MIX ASPHALT PROGRAM (MAP) ROUND-1

### OBJECTIVES (WHAT) RESOURCES (HOW)

#### Procedures and Instructions Developed Controlling consistency

- Sample Fabrication and Testing Instructions (**SFTIs**)
- Interactive Reporting Forms (**IRFs**)
- Large Input from MTO's round of correlations

OMAP-SFTI-SCB-22-REV1

SAMPLE FABRICATION AND TESTING INSTRUCTIONS (SFTI)  
DETERMINING THE FRACTURE POTENTIAL OF ASPHALT MIXTURES USING  
THE FLEXIBILITY INDEX TEST

- SCOPE
- This document covers the procedure for specimen preparation and testing using the Semi-Circular Bend Test (SCB) fixture to determine the fracture potential of asphalt mixtures.
- RELEVANT DOCUMENTS
- Ministry of Transportation (MTO) Bituminous Section (2021), First Round of MTO Inter-Laboratory Correlation Program For Flexibility Index Test (FIT) Using Semi-Circular Bend (SCB) Geometry.
- AASHTO TP 124-18, Standard Method of Test for Determining the Fracture Potential of Asphalt Mixtures using the Flexibility Index Test (FIT).
- AASHTO R30, Practice ASTM D6925, Test Method for Preparation and Determination of the Relative Density of Asphalt Mix.

Part of OAPC/ORBA

ORBA  

# O-MAP Round 1 Hamburg Wheel Tracking Test

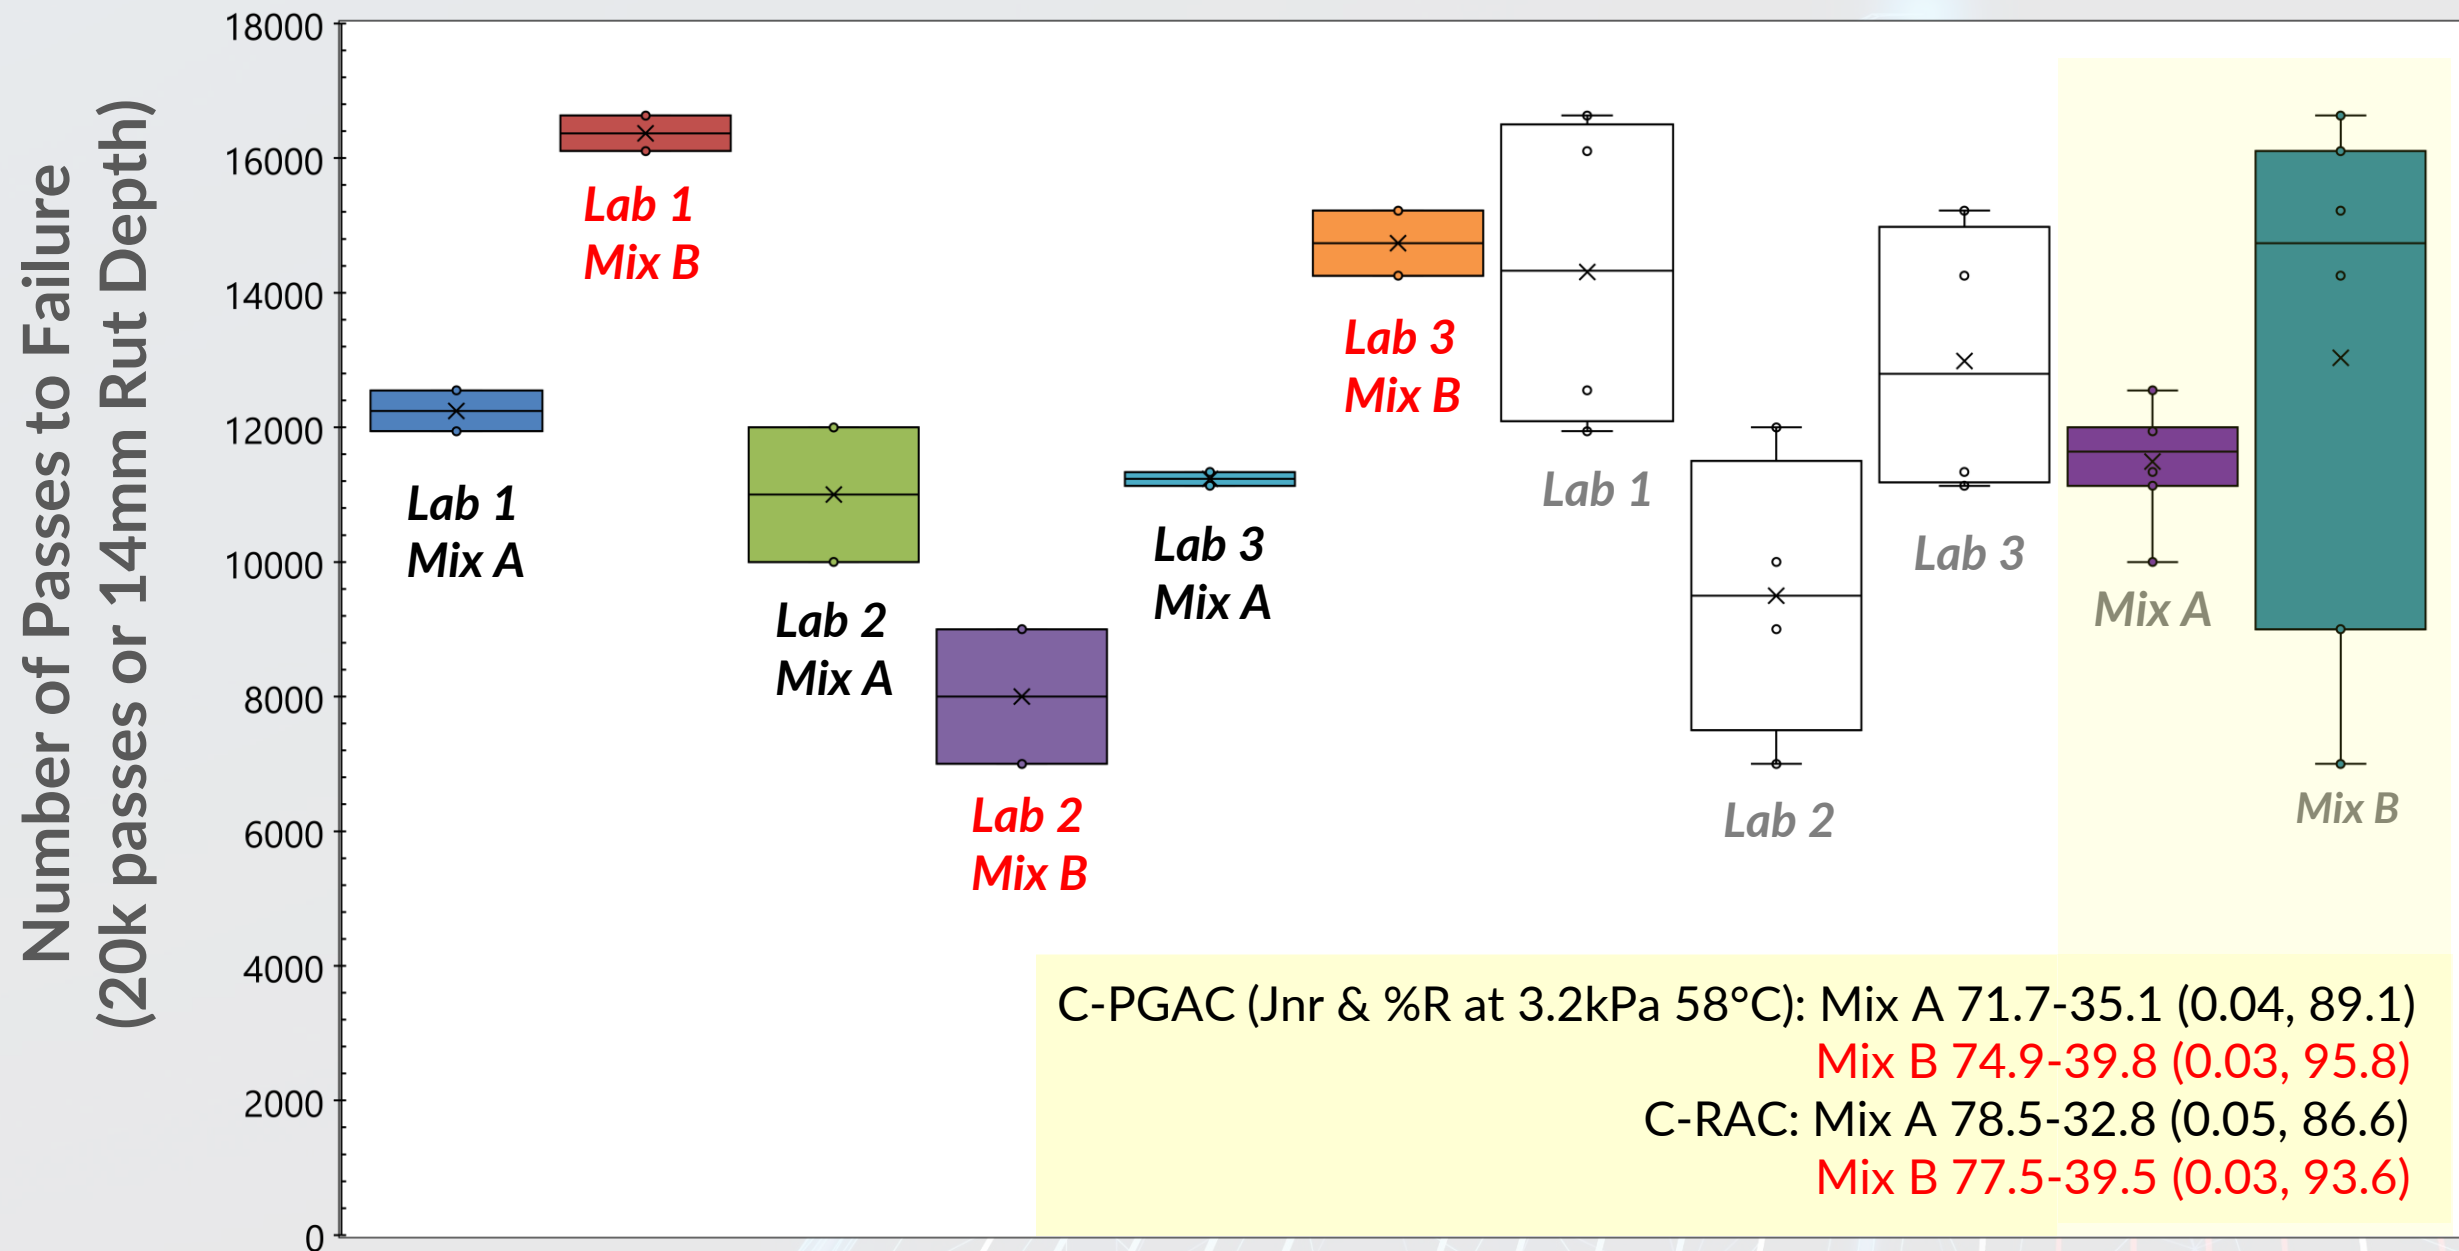

## TEST INFO

SG compacted  
60-mm thickness  
Tested at 50°C  
MTO preliminary spec Max. 6 mm  
after 20k passes for PG 70-YY

# O-MAP Round 1 Hamburg Wheel Tracking Test

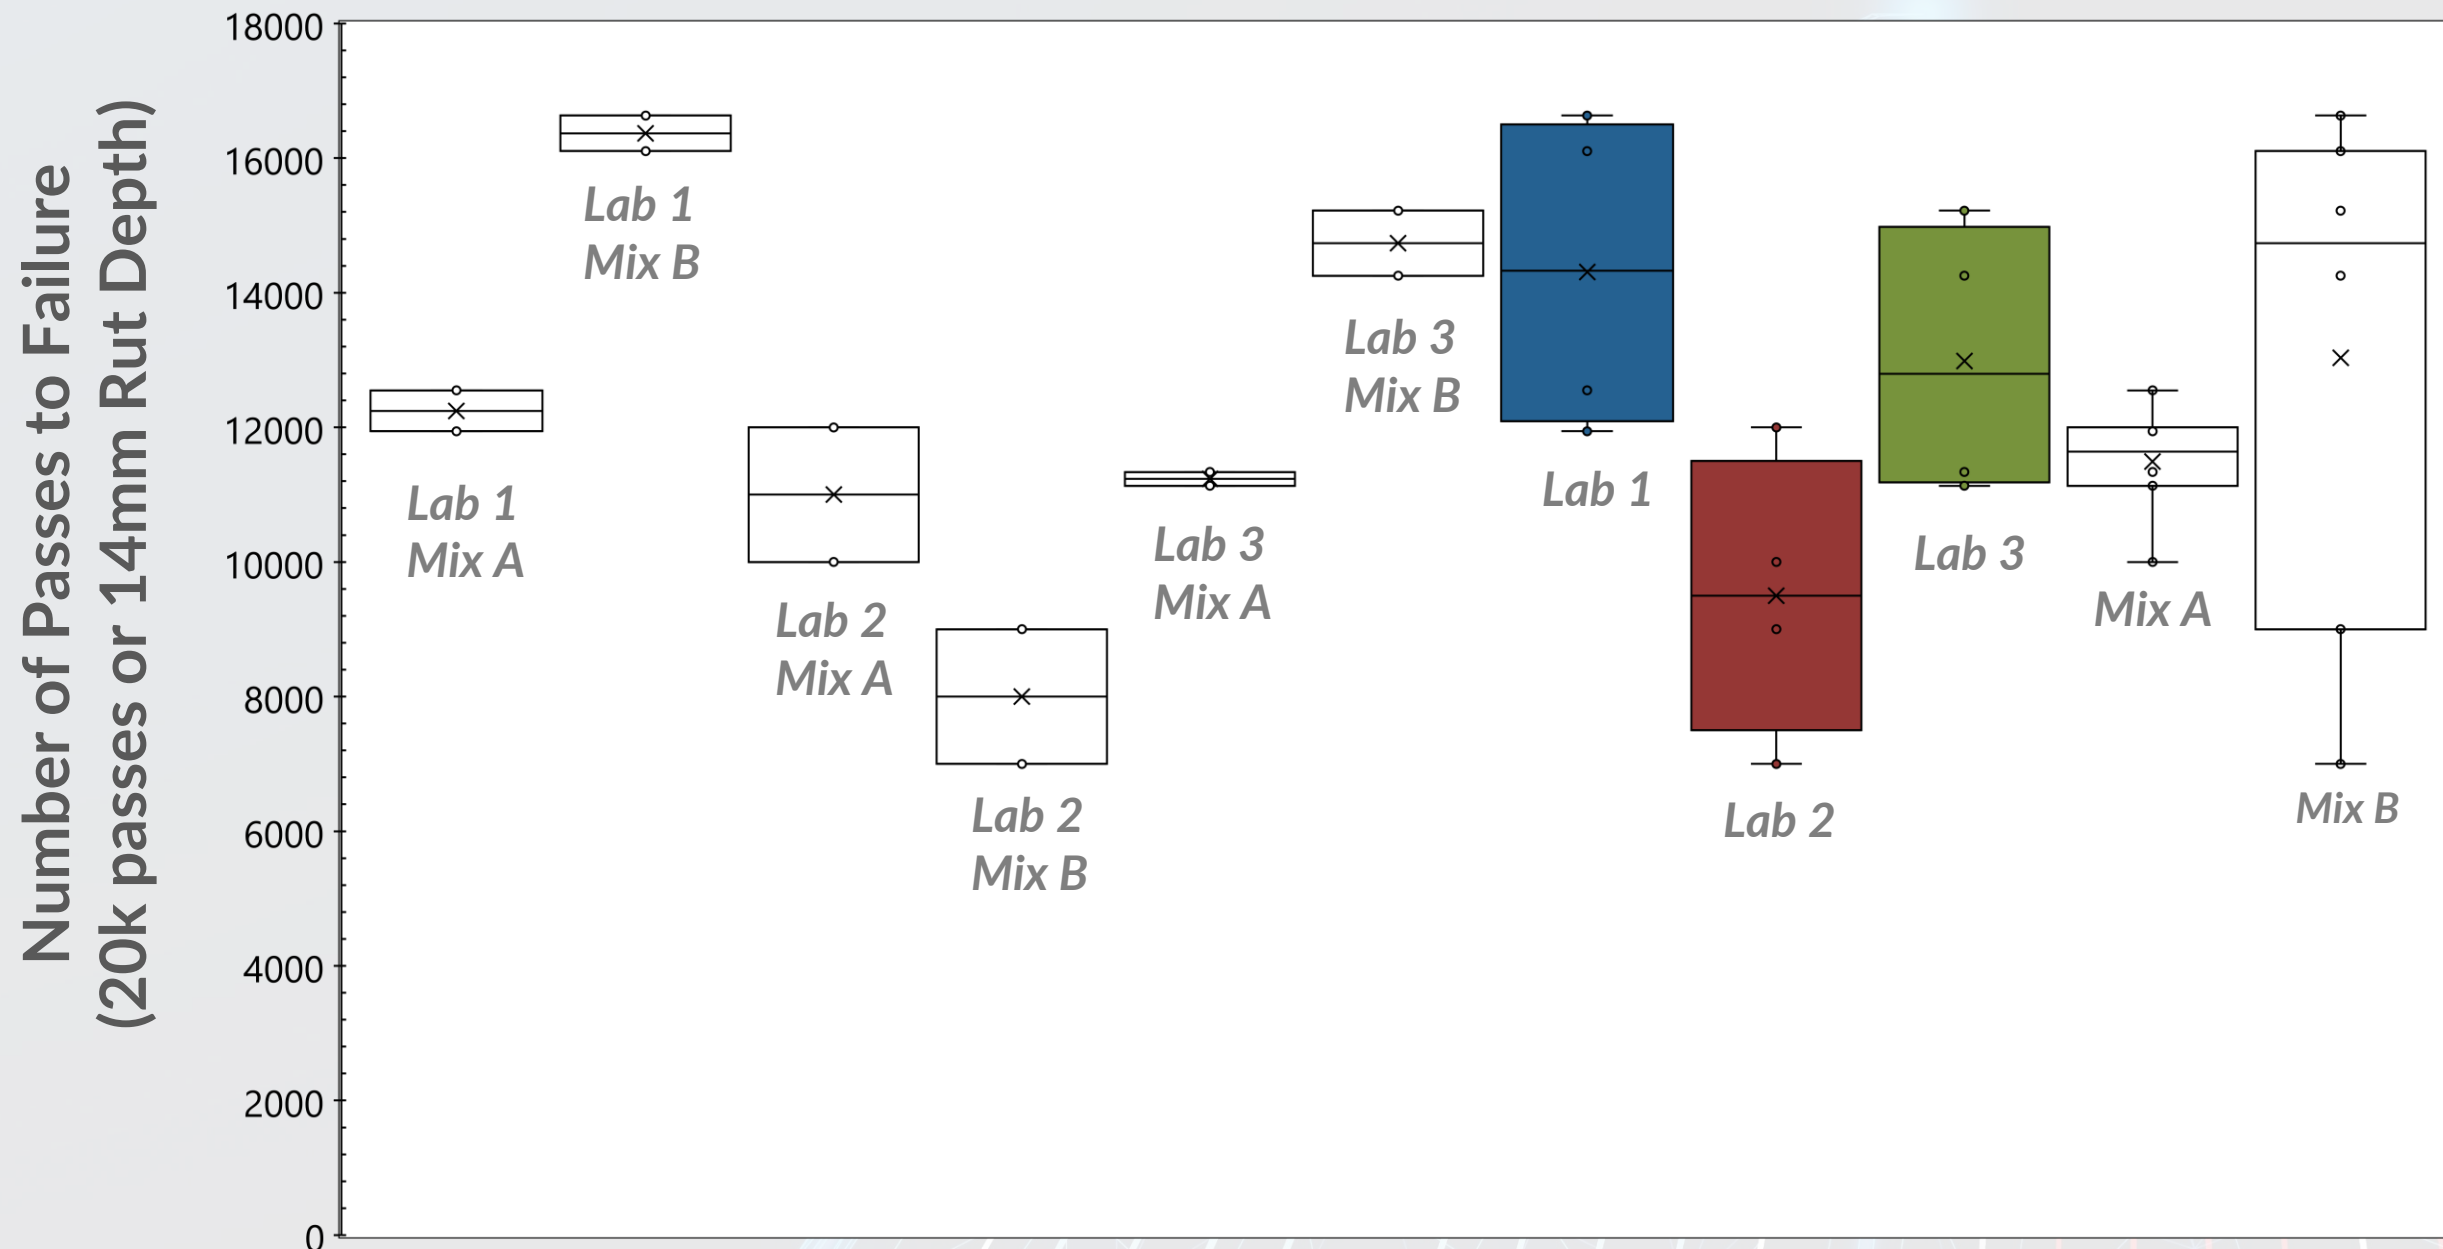

## FINDINGS

Both mixes A & B failed rutting criteria - Good Field Rutting Reported by the Contractors

Mix B exhibited higher variability - gradation or PGAC? Relatively lower AC content (around 0.25% difference)?

Property		Mix A	Mix B
Gradation (% passing)	Sieve Size (mm)		
	9.5	89.5	81.7
	4.75	65.0	54.4
	2.36	46.3	39.8
	0.075	5.10	3.30
VMA (%)		14.4	15.8
VFA (%)		72	74.7
Dust Proportion, DP		1.2	0.69
Asphalt Content (%)		5.25	5.0
TSR (%)		90.4	95.2
Extracted AC content (%)		5.30	5.06

# O-MAP Round 1 Hamburg Wheel Tracking Test

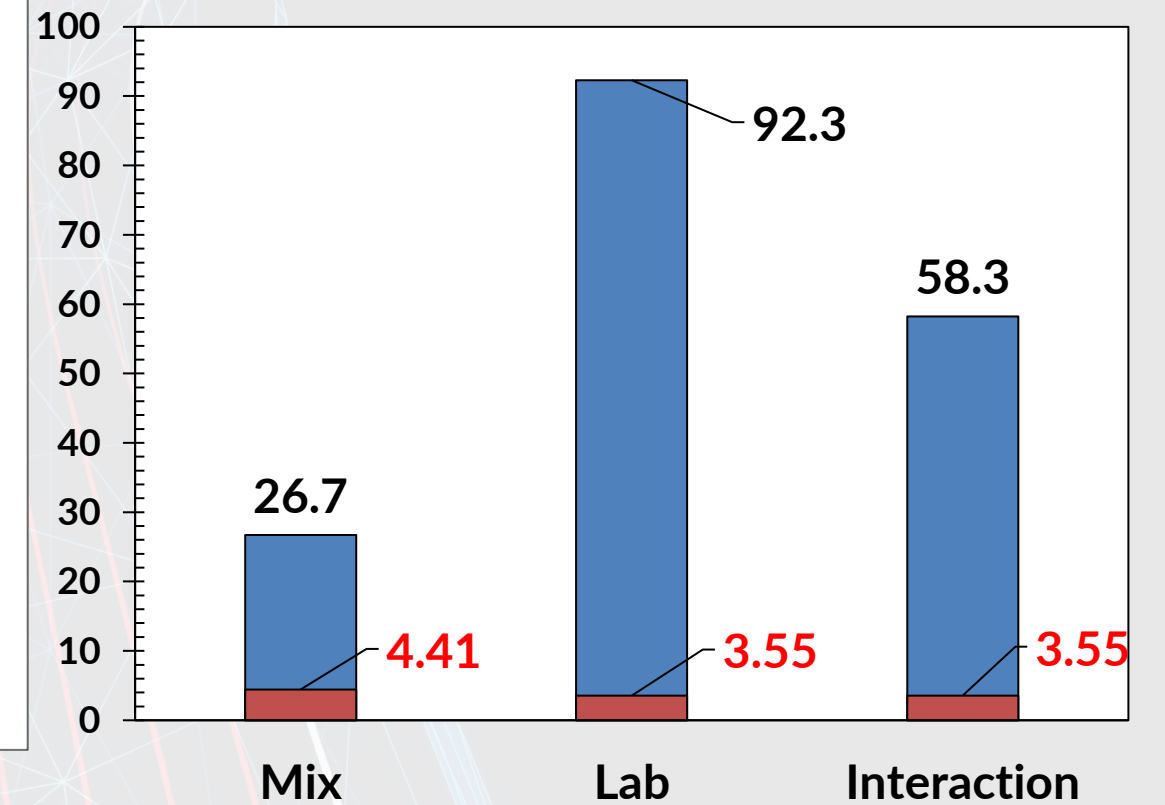

## FINDINGS

Inter-laboratory effect is still more significant

Might be due to fabrication inconsistencies (sample splitting, heating, different type of compactors, lowered height)

### ANOVA (F-Value vs F-Critical)

# SIDE NOTE

## LAB COMPACTION – SAMPLE FABRICATION

### Barber Asphalt Paving Company

Manual Mixing  
Feel of Workability & Ratio of AC with Sand and Pulverized carbonite Lime

### Francis Hveem (Caltrans)

Introduction of mechanical kneading compactor  
Slightly angled

### Superpave – SHRP program

Introduction of gyratory compactor, **150-mm Dia. and 115-mm Height**

Level 1 (volumetric-based approach) using 4% air voids

Level 2 & 3 (performance-based/Pavement Design approach) –  
Never implemented

First trial in Ontario placed in 1996

**Not all SGCs the same!**  
Thickness changes = Higher variability

### Charles Hubbard and Frederick Field (Hubbard-Field Method)

First 30 hand-tamper “heavy blows” were applied with a 50 mm diameter hand tamp followed by 30 blows with a 145 mm diameter hand tamp.  
Sample Turnover req'd.

Bruce Marshall (Mississippi DOT)  
Refined Hubbard Field Method – standardization of compaction energy with drop hammer

Testing Agency	Frame Stiffness (Deg / N-m)					
	Superpave Gyratory Compactor (SGC) Model

# O-MAP Round 1

## SCB Intermediate Cracking Index - FI

### TEST INFO

SG compacted  
160-mm+ thickness and then cut  
into 50-mm disks  
Flexibility Index (FI) Min. 10  
Tested at 25°C

# O-MAP Round 1

## SCB Intermediate Cracking Index - FI

## FINDINGS

All mixes passed Min. FI of 10; except mix B when tested by "Lab 3"

Mix A & B are statistically expected to behave similar; Mix B still higher variability in behaviour

Mix A has tendency to exhibit lower FI – contrary to higher AC content

Variabilities could be due to fabrication inconsistencies (sample splitting, heating, different type of compactors), as well as PGAC formulations/sources

# O-MAP Round 1

## SCB Intermediate Cracking Index - FI

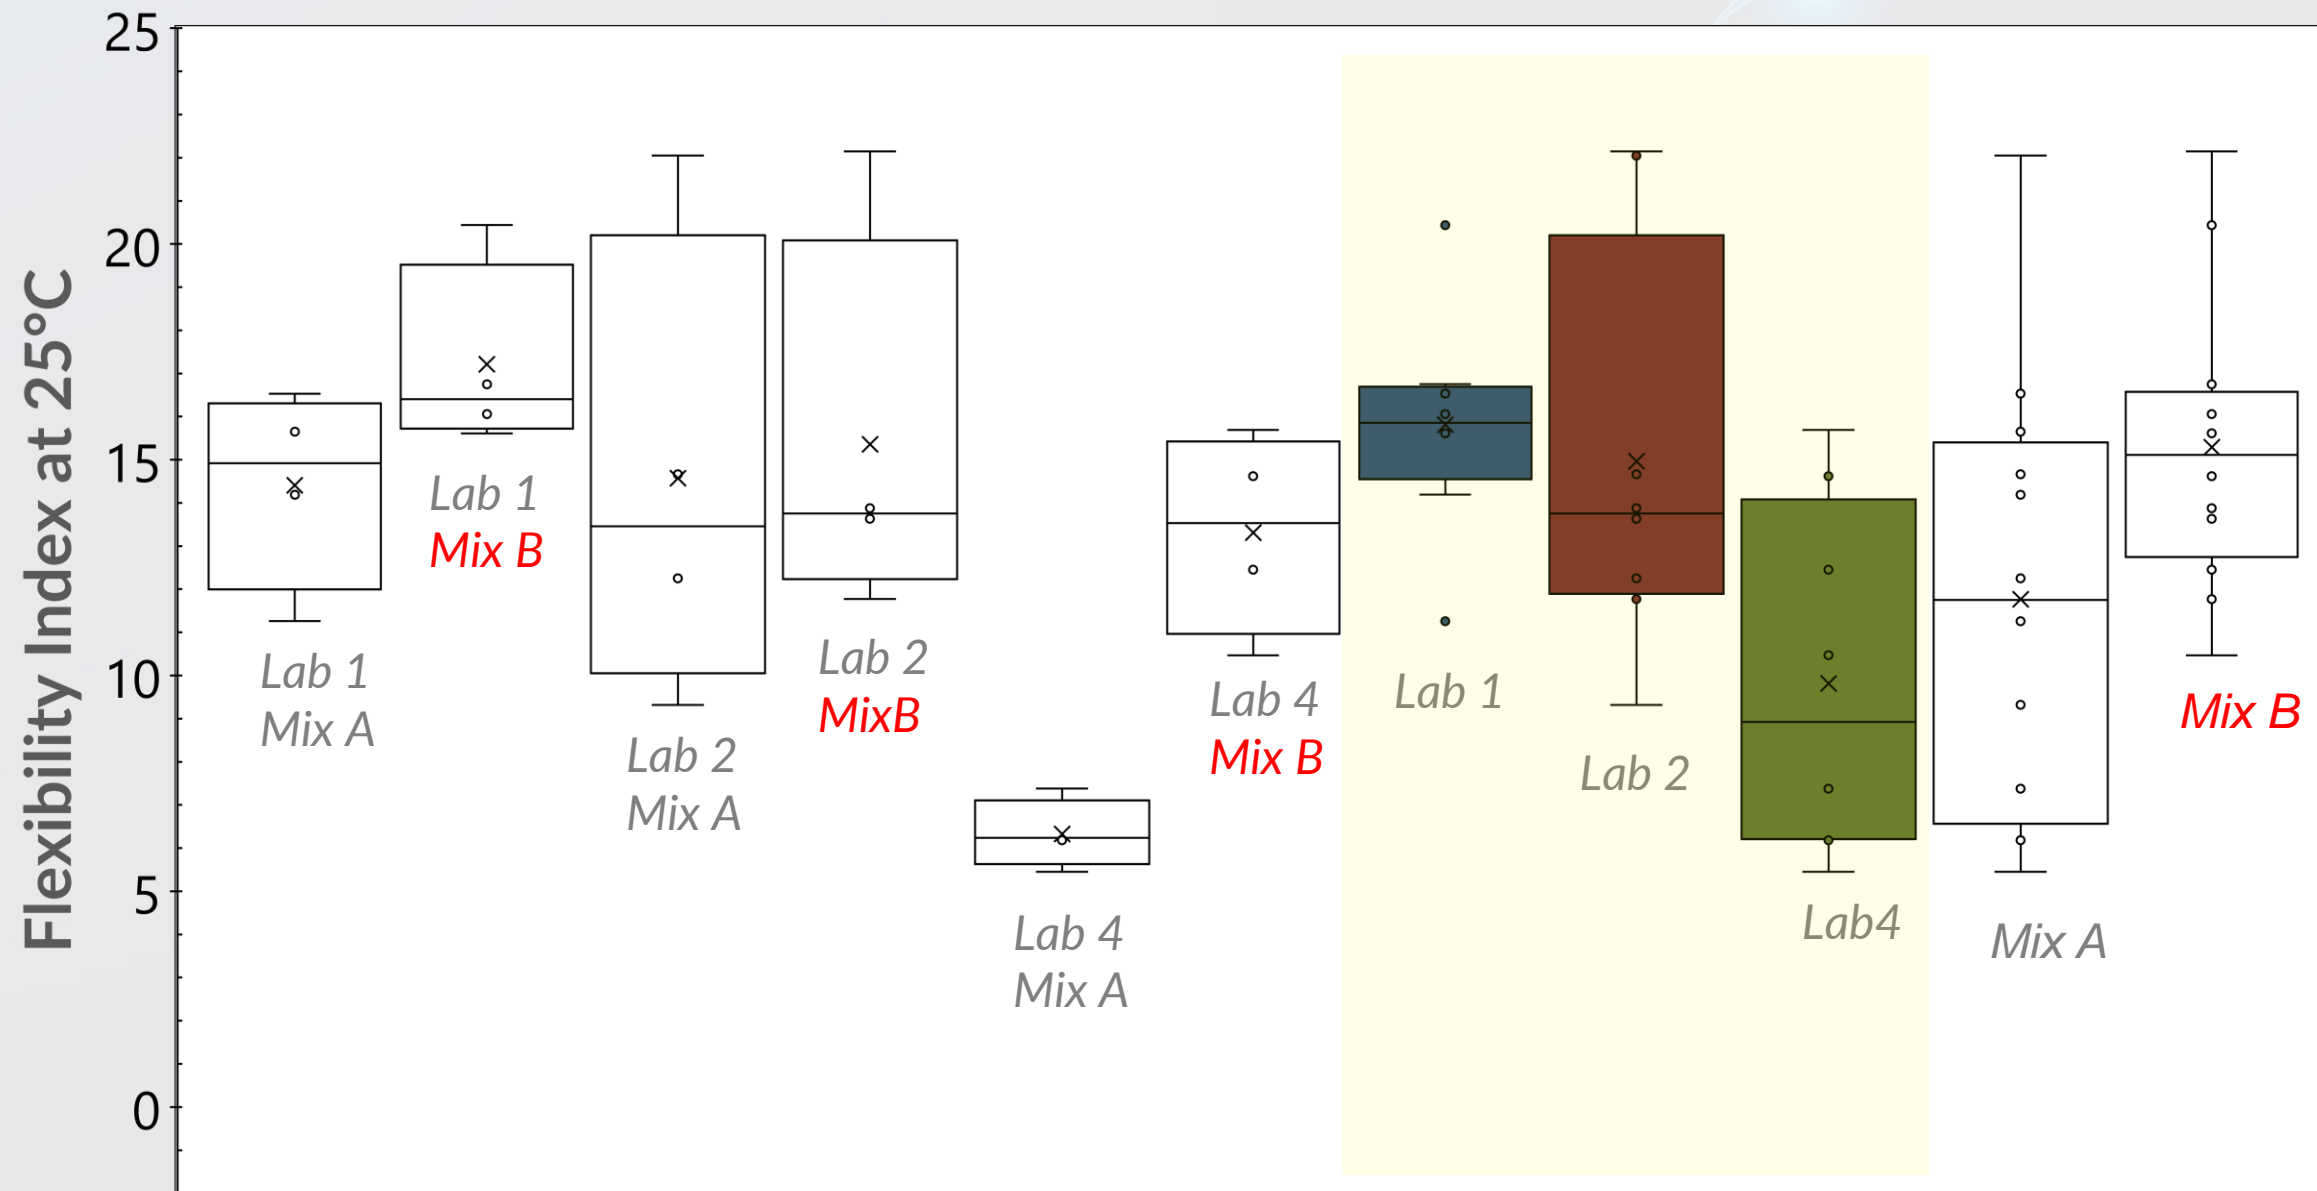

## Binder Properties

Tank Sample OR RAC	Mix ID	PAV Method	CTOD (m)	X-Over Temp at $\delta = 45^\circ$
Tank Sample	A	20	25.2	12.6
		40	9.70	21.8
RAC	A	20	9.00	21.6
		40	4.90	31.0
Tank Sample	B	20	25.10	26.1
		40	15.20	15.9
RAC	B	20	11.0	10.6
		40	9.50	25

# O-MAP Round 1

## SCB Intermediate Cracking Index - FI

### Sources of Variation

- Screw Driven Frame vs Hydraulic Frame
- Internal & External Chamber Conditioning vs Water Bath
- Free rollers – screw or springs

# O-MAP Round 1

## DCT Low Temp Cracking Index

### TEST INFO

SG compacted  
160-mm+ thickness and then cut  
into 50-mm disks  
DCT Min. 600 Fracture Energy  
Tested at 10°C above PG -YY

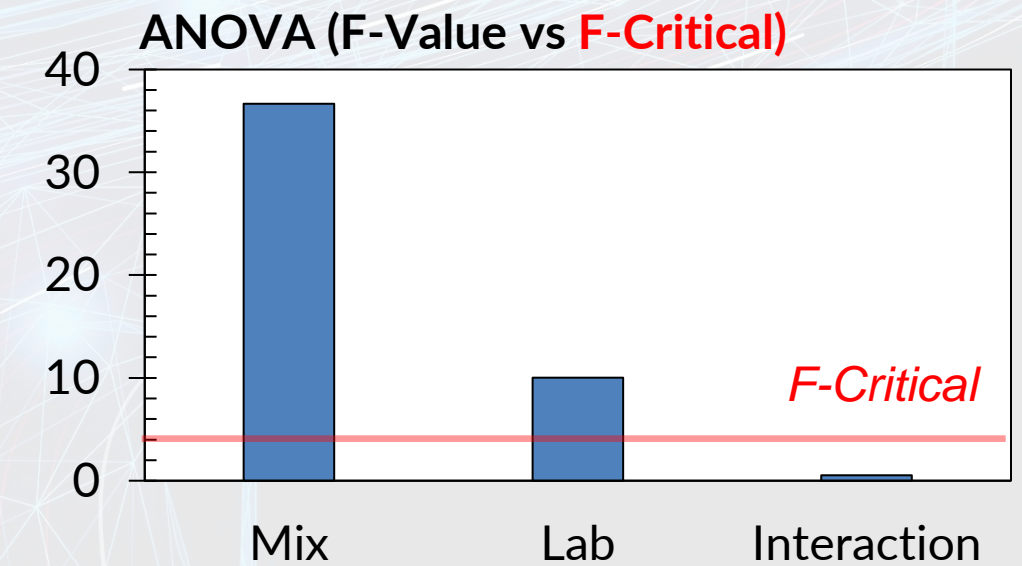

# O-MAP Round 1

## DCT Low Temp Cracking Index

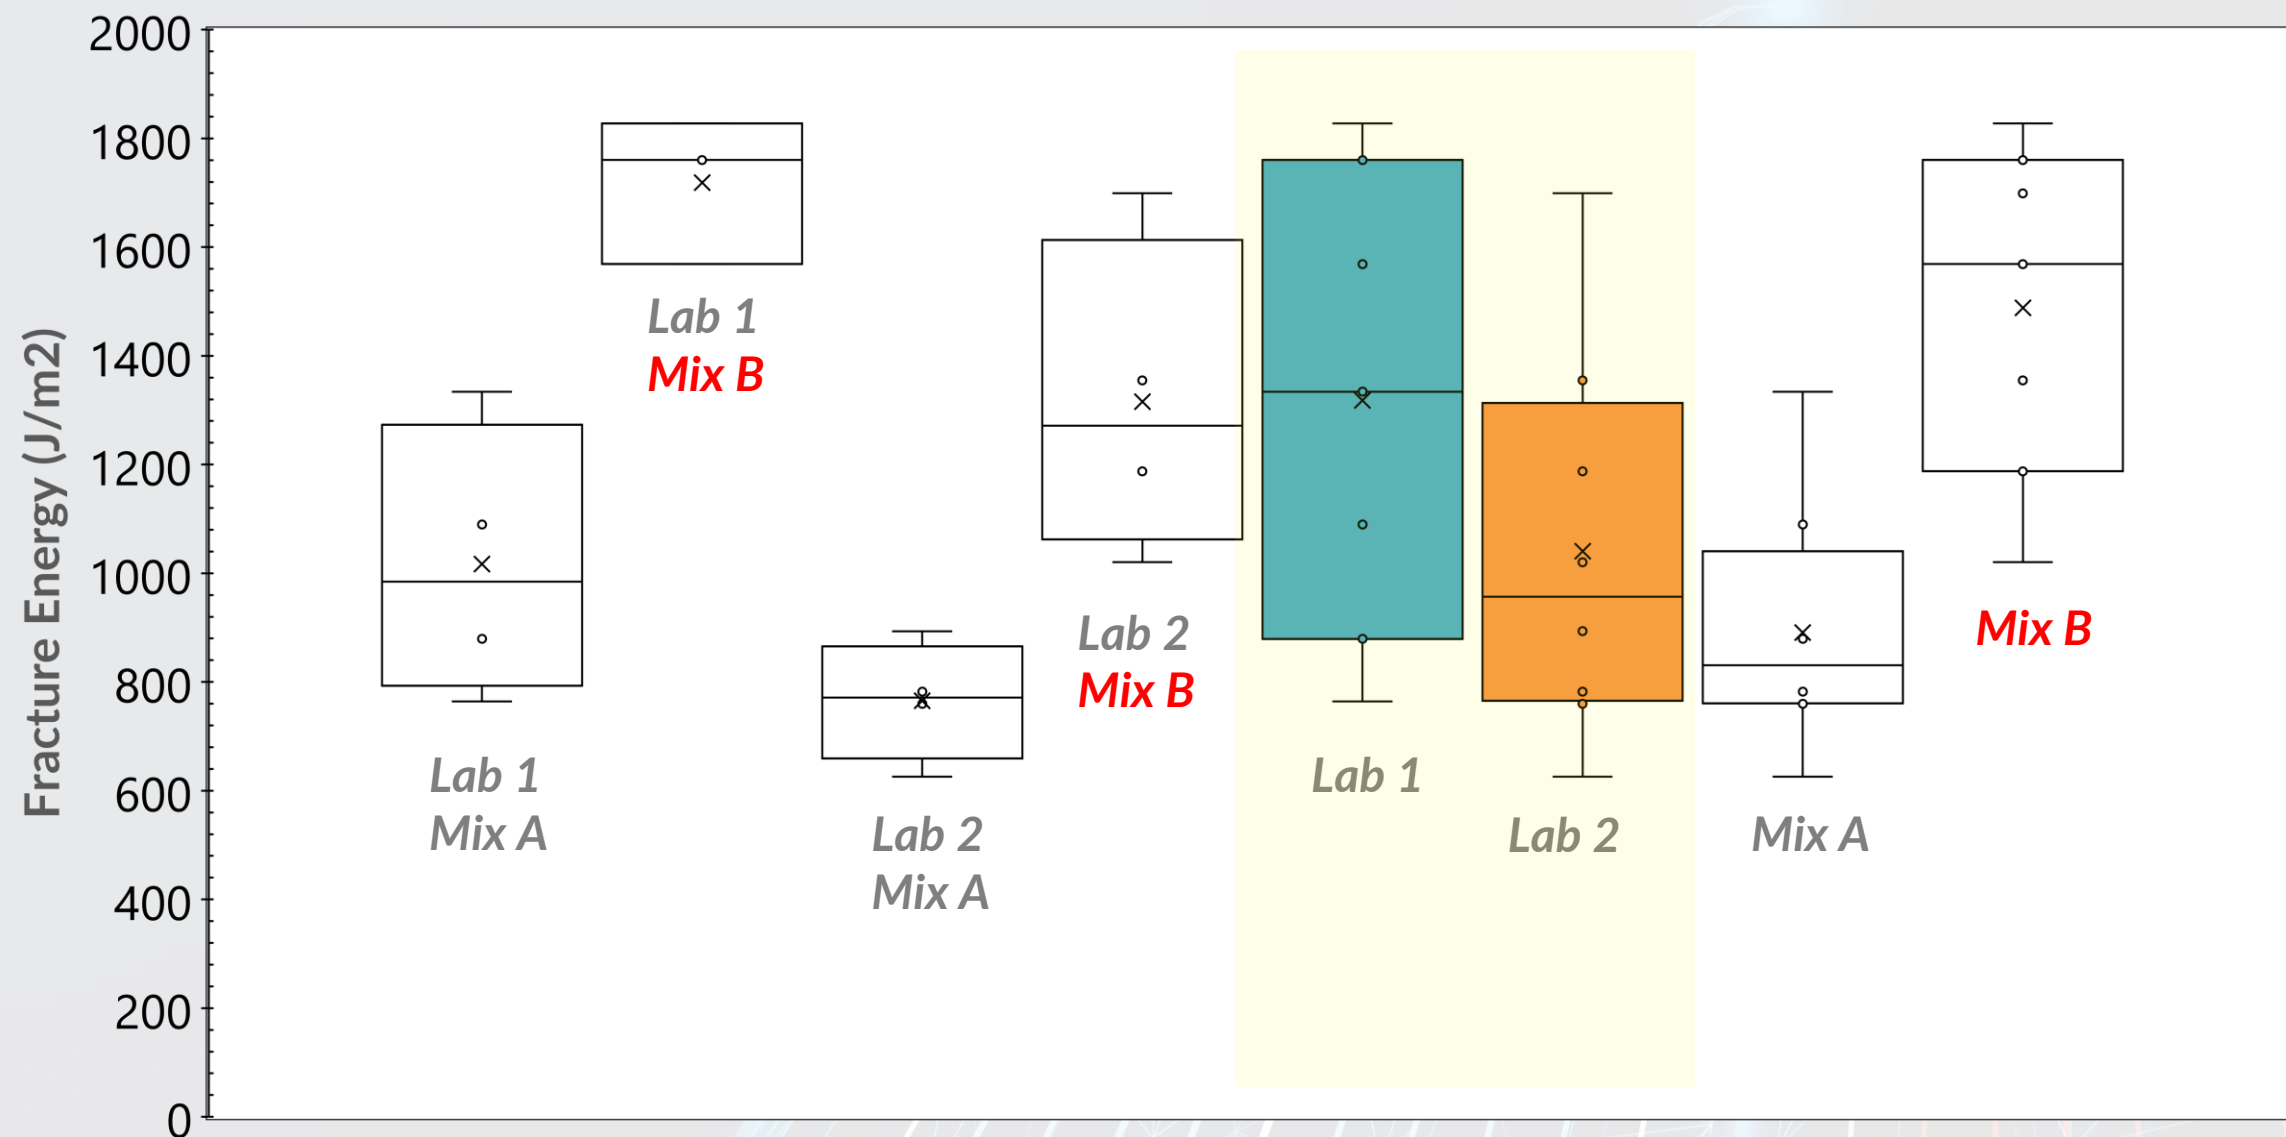

## FINDINGS

	Mix	PAV Method	C-LT (°C)	Δ Tc	EXBBR	
					LTLG	Grade Loss
Tank	A	20	-35.1	-0.9	-30.9	3.9
		40	-32.0	-5.4	-27.0	3.3
RAC	A	20	-32.28	-4.9	-26.0	4.6
		40	-28.51	-6.8	-20.3	7.5
Tank	B	20	-39.8	2.0	-37.1	1.2
		40	-36.2	1.0	-32.9	3.5
RAC	B	20	-39.54	0.1	-34.1	2.9
		40	-35.07	-2.9	-28.4	6.3

# O-MAP Round 1

## DCT Low Temp Cracking Index

### Fixture Differences

Potential source of variability and may need further investigation

The same manufacturer of testing frame and chamber (same loading capacity)

# Ontario Asphalt Expert Task Group (OAETG)

## MIX ASPHALT PROGRAM (MAP) ROUND-1

### FINDINGS

#### Mix Properties

Both binder and mix properties do play a role in performance – inclusion of mix performance check part of design & production

#### Procedures and Instructions Developed

Controlling consistency

Sample Fabrication and Testing Instructions (SFTIs) requires refinement on sample heating, splitting, compaction and cutting

#### Collaboration

Work Closely with MTO and other agencies considering performance-verified or based designs on coarse and fine tuning sample fabrication, as well as testing parameters (including temperature)

# Ontario Asphalt Expert Task Group (OAETG)

---

## MIX ASPHALT PROGRAM (MAP) ROUND-1

### FINDINGS

### FUTURE STEPS

Research work on effect of cuts, gyratory frame stiffness; especially for HWT test

Testing temperature combined with mix properties on variability of HWT, SCB & DCT

Evaluating IDEAL type of tests such as Cracking and Rutting test (CT & RT), or any other test methods

Placing greater emphasis on laboratory produced mixes to be tested part of mix design stage;

Establishing a performance test correction factor between laboratory and plant produced mixes;

Simplifying the binder testing and placing more emphasises on mix testing and performance;

Evaluating mixes containing RAP

Understanding the role of traffic in test method and/or temperature selection.

# ACKNOWLEDGEMENTS

---

**OAETG members for their contributions to the success of the group**

**Contractors donating materials and local testing labs**

**Special thank to Oversight Study Team (OST) for help with data analysis and reporting:**

Mike Aurilio, Yellowline Asphalt

Yashar Azimi Alamdary, Coco Group

Amin Mneina, Good Roads

Mehran Farashah, York Region

Ali Al-Abbasi, Aecom

Saeid Salehi Ashani, University of Waterloo

Trevor Tinney, Town of Innisfil
